

GLOBAL LITERACY RATE

Prepared By:
Timothy Mekanjuola

05-April-2025

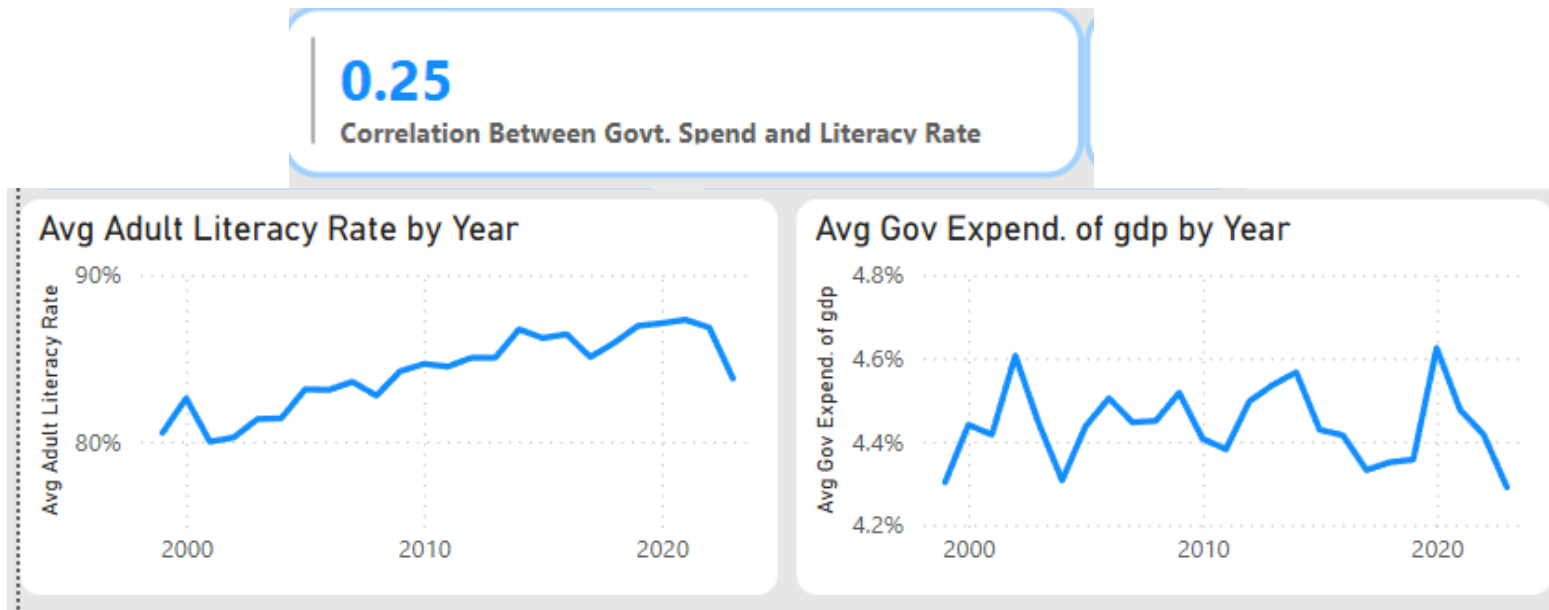

Summary Report: Education Data Insights (1999-2023)

1. Overview

This report analyzes global education data from 1999 to 2023, focusing on government expenditure on education and adult literacy rates across different countries and continents, and also on enrolment rate into the three school tiers (primary, secondary, and tertiary)

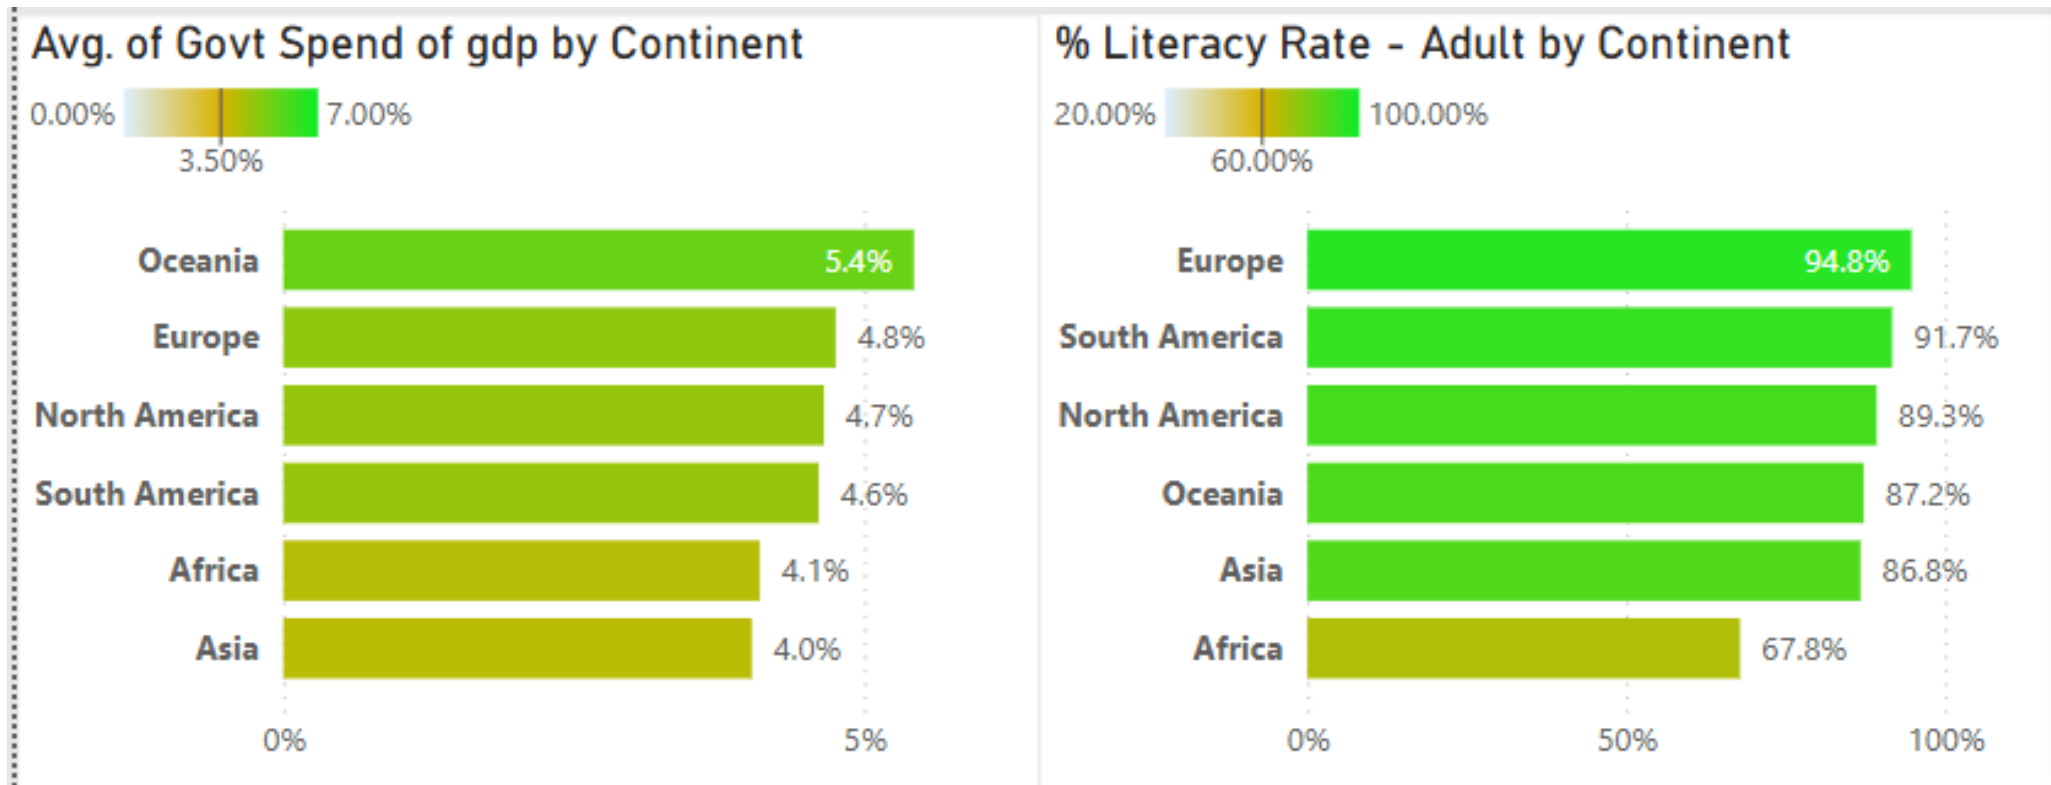

2. Key Findings

- **Correlation Analysis:** A moderate positive correlation was observed between government expenditure as a percentage of GDP and adult literacy rates, especially in developing regions.

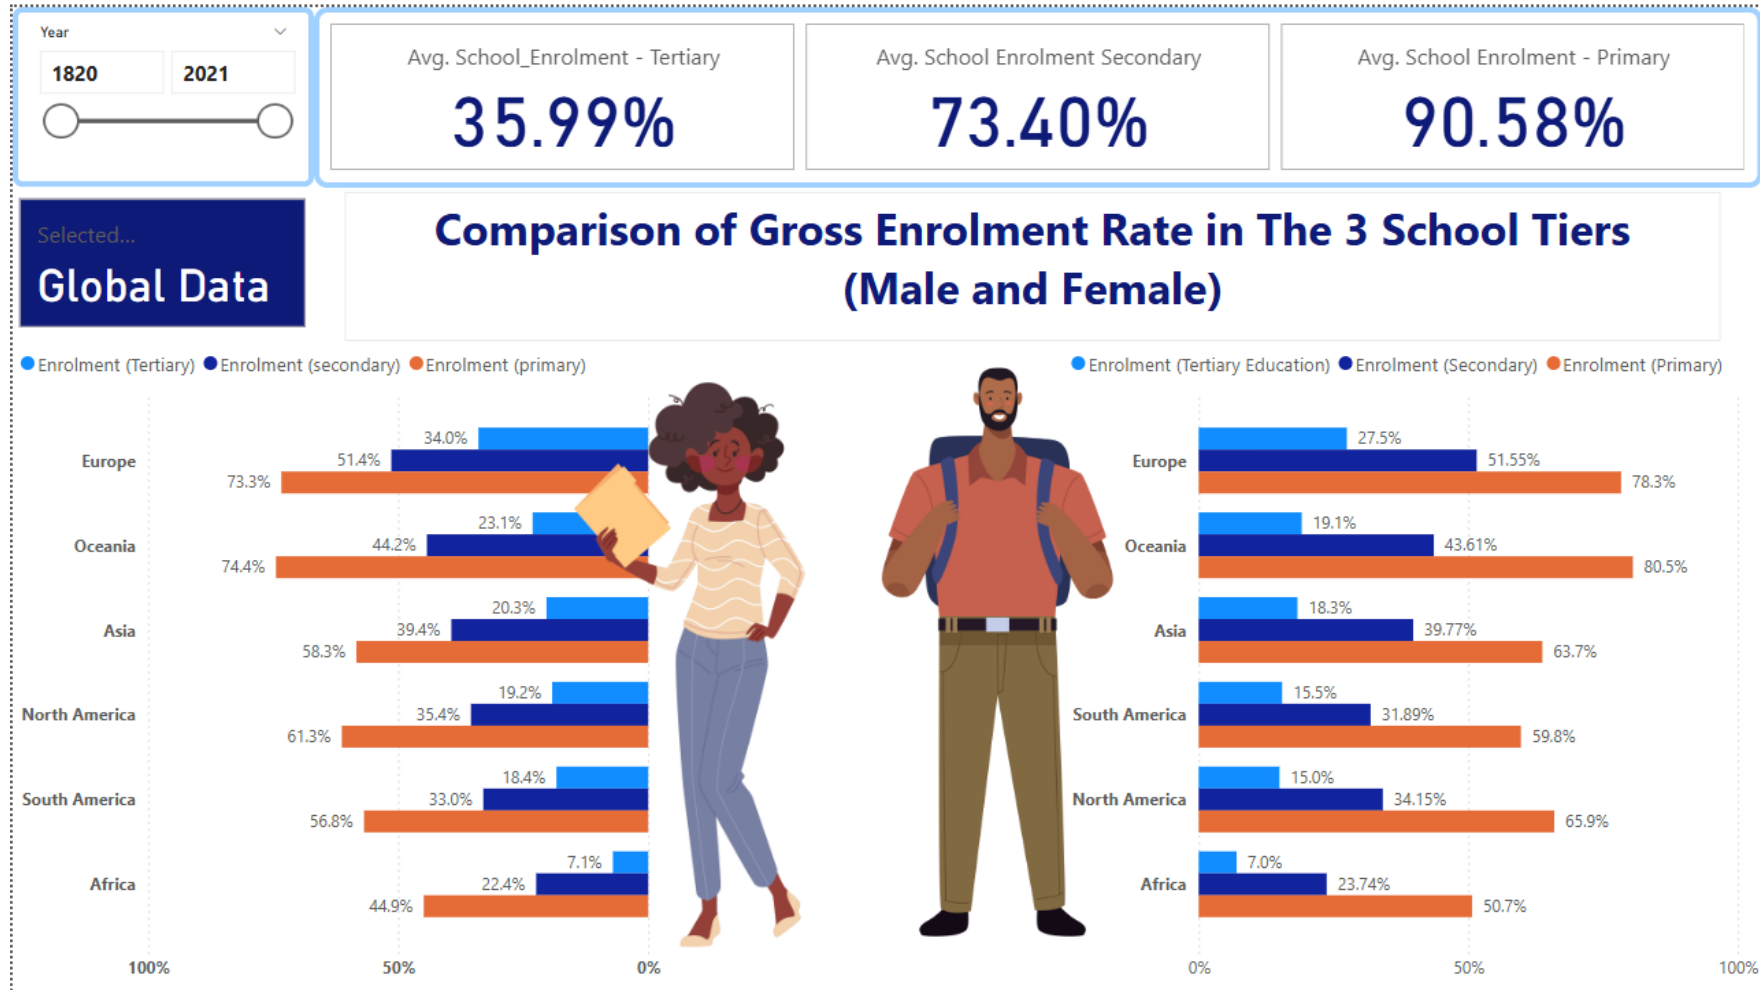

- **Regional Disparities:**

- African countries generally show lower average literacy rates and education investment.
- European and North American countries tend to have higher literacy rates and steady government spending.

- **Global Decline in Enrolment Rate During Age Transition:**
- The report indicates that as people grow older, both male and female enrollment declines. Fewer individuals enroll in secondary education compared to primary, and even fewer transition into tertiary education.

3. Actionable Recommendations

- **Targeted Investment:**
 - Low-performing countries, especially in Africa and parts of Asia, should increase education funding—prioritizing primary and adult education.
 - Link budget allocations to literacy improvement KPIs.
- **Policy Interventions:**
 - Launch national literacy campaigns targeting adult populations.
 - Provide teacher training programs and incentives to reduce pupil-teacher ratios.
 - Invest in digital and remote learning tools to support underserved areas.
